Two IARPA-sponsored research programs aim to improve methods for intelligence analysts. In ACE, the world’s largest political and economic forecasting competition, five research teams recruited 15,000 volunteers, who produced over a million individual forecasts. The winning team’s success was described in Philip Tetlock’s recent book *Superforecasting*. Whereas ACE used the wisdom of crowds to make more accurate forecasts, CREATE (for Crowdsourcing Evidence, Argumentation, Thinking and Evaluation) will use crowd wisdom to improve analytic reasoning.

Dr. Steven Rieber, a Program Manager at IARPA, previously led efforts to improve analytic tools and training for the Office of the Director of National Intelligence. He received his Ph.D. in philosophy from Princeton and before joining the Intelligence Community was a professor of philosophy at Georgia State University.

Seating is free but limited.
